

# HVLAS Flight deck module

## Description

Modular design offers different configurations of LINKSrechts HVLAS Flight deck module.

Green Deck Light Modules can be used with Night Vision Goggles (NVG) in accordance with MIL-STD. One NVG compatible Deck Edge Light is integrated in the housing.

### HIDD 1201 LED – HVLAS Flight deck module

The Deck Light Modules are being used for glare-free and even illumination of the helicopter flight deck giving a clear 3-dimensional view without blinding.

### HIDL 1204 LED – HVLAS Flight deck module

The Deck Light Modules with integrated Line Light (white/white or green/white or green/green) are being used for glare-free and even illumination of the helicopter flight deck giving a clear 3-dimensional view without blinding as well as for illumination of any reference line of the flight deck.

The Line Light is a great feature to highlight any given reference lines as for instance the forward limit clearance line.

### HIDS - Flight deck module

The Deck Light Modules with integrated Service Light (white/white or green/white) are being used for glare-free and even illumination of the helicopter flight deck giving a clear 3-dimensional view without blinding and as well for illumination of the helicopter.

The integrated Service Light can be used for securing, pre-flight inspection, loading and unloading, refuelling, etc.

Main advantages:

- Night Vision Goggles (NVG) compatible
- Integrated amber or green LED edge light according to ICAO standards
- Shock, Vibration and EMC proofed
- Non-corrosive and Radar Cross Section optimized case for long lifetime
- Low power consumption
- LEDs instead of bulbs for long lifetime and absolutely low lifetime costs
- Proof against seawater / fuel
- Dimmable
